A Programming Study

In this study, you will be asked to perform two programming tasks, using your own computer and tools, on codebases we provide. You will also be asked questions about your experiences. On aggregate, we expect the tasks will take you no more than one hour.

We will assume familiarity with Java programming and Lombok. You will also need to run basic Gradle commands, but need not be familiar with Gradle ahead of time.

We anticipate no risks to you beyond those you might encounter in the course of your daily life. There is a risk that you may feel frustrated or upset if you are unable to complete a task in the given time or if the experimental machinery does not function as intended. We are evaluating the tool(s), not you. Failure to complete a task in the time provided may be the fault of the tool. We are not evaluating your abilities, and your participation will be completely anonymous.

You may withdraw from the study at any time (even when partially complete) without penalty. To do so, simply stop working on the programming task and inform the experimenter.

Data collected in this study will only be used in aggregate. We will not collect or store personally identifiable information.

Thank you for your participation in the study.

I consent to participating in the study described above.
